

TARUN CHANDRA

Software Engineer | Backend | Microservices

7676359198 | tarunchandratc1998@gmail.com | Bengaluru, Karnataka
LinkedIn: [linkedin.com/in/tarunchandra1998/](https://www.linkedin.com/in/tarunchandra1998/) | GitHub: github.com/tarunchandra1998

Professional Summary

Software Engineer with **4.5+** years of experience designing and building scalable microservices, distributed systems, and event-driven platforms. Proven expertise in **Golang, Node.js, Kafka, Python, PostgreSQL, React, and AWS**, developing **high-throughput** applications that process millions of events daily. Experienced in building real-time segmentation, personalization, recommendation, and search platforms using cloud-native architectures on **Kubernetes** and AWS. Skilled in **REST API** development, **microservices** design, observability, and performance optimization, with a strong focus on scalability, reliability, and maintainability.

Skills

Languages : JavaScript, Golang, SQL

Backend & Frameworks : Node.js, Express.js, gRPC, REST API Design, FastAPI, Middleware, Authentication (JWT, OAuth)

Frontend: React.js, Redux, Context API, HTML5, CSS3, Responsive UI, Axios, Form Handling

Databases & Caching: PostgreSQL, MongoDB, DynamoDB, Redis, Indexing, Query Optimization

Cloud & DevOps: AWS (EKS, EC2, S3, Lambda, IAM, Secrets Manager, CloudWatch)

Infrastructure & Orchestration : Docker, Kubernetes, Kafka, Terraform, CI/CD, Github Actions

Monitoring & Observability : Datadog (APM, Logs, Metrics), PagerDuty, Splunk

API & Integration: REST APIs, API Gateway, Third-Party API Integrations

Tools : Git, GitHub, Bitbucket, JIRA, Postman, Swagger/OpenAPI, Agile/Scrum

Architecture: Microservices, Event-Driven Systems, Distributed Systems, Scalable Systems, High Availability

Work Experience

Conde Nast Technology Lab (Talent Hivee), Bengaluru

Nov 2024 - July 2026

Software Engineer I

- Engineered microservices for Condé Nast's next generation **segmentation, recommendation & search** platform, powering 60+ global brands (Vogue, Wired, GQ, The New Yorker) and processing 5M+ events/day.
- Built scalable backend microservices using **Golang, Node.js, Kafka and PostgreSQL**, improving system throughput and enabling near real-time user targeting.
- Architected **Kafka**-based event-driven pipelines to process and classify user events in real time, reducing data processing latency and improving segmentation accuracy.
- Optimized data storage and query performance using **PostgreSQL** and **DynamoDB**, reducing query latency for high-volume workloads.
- Developed internal React dashboards for real-time segmentation insights and campaign targeting, improving data visibility and reducing decision-making time.
- Deployed and managed cloud-native services on **AWS (EKS, S3, Lambda)** using **Docker, Kubernetes**, and **Terraform**, achieving **99.9% uptime** and improved scalability.
- Implemented observability and alerting using **Datadog** and **PagerDuty**, reducing incident response time and improving production reliability.
- Designed end-to-end microservices architecture handling high-concurrency workloads and ensuring system scalability.

Software Development Engineer

- Contributed to ReachShip, a **SaaS**-based global shipping and logistics platform supporting high-volume shipment processing.
- Engineered RESTful APIs and microservices using **Golang and Node.js** for order and shipment processing, improving system throughput.
- Enhanced system scalability by integrating PostgreSQL and MongoDB, reducing data retrieval latency.
- Built backend services for real-time shipment tracking and logistics workflow automation, enabling faster status updates and improving operational efficiency.
- Developed React-based UI components for shipment tracking dashboards, improving user experience and reducing manual tracking efforts.
- Deployed services on AWS (ECS, Lambda, S3) using Docker and Kubernetes, improving system reliability and achieving **uptime**.
- Implemented CI/CD pipelines to automate build, test, and deployment processes, reducing deployment time.

Caplix Technologies, Remote

May 2022 - Nov 2022

Associate Software Engineer

- Developed custom web applications for e-commerce and enterprise clients, supporting scalable business workflows.
- Designed and implemented RESTful APIs using Node.js, Golang for user management, authentication, and order processing, improving API response time.
- Built backend services for inventory, billing, and reporting workflows, enhancing operational efficiency and data accuracy.
- Implemented role-based access control (RBAC) for secure admin and user dashboards, improving system security and access management.
- Integrated payment gateways and third-party APIs for business operations.

ICICI Prudential, Bilaspur

Feb 2022 - May 2022

Financial Services Consultant

- Assisted with customer onboarding, policy documentation, and client support.
- Handled customer queries related to insurance and investment products.

Project Work

Segmentation Platform

Tech Stack: Golang, Node.js, Kafka, PostgreSQL, AWS EKS, Kubernetes, Terraform

- Engineered a real-time user segmentation platform processing millions of events per day using event-driven architecture.
- Built Kafka producer and consumer services for dynamic audience targeting and campaign personalization.
- Developed real-time segment lookup, reverse lookup, and privacy deletion workflows.

Personalization & Recommendation Platform

Tech Stack: Node.js, Golang, Kafka, MongoDB, Redis, DynamoDB, AWS EKS

- Developed backend microservices serving personalized content recommendations.
- Leveraged real-time user behavior, segmentation data, and content metadata for personalization.
- Implemented caching and optimization strategies to improve response times and scalability.

Enhanced Semantic Search Platform

Tech Stack: Node.js, Python, MongoDB, Redis, OpenAI Embeddings, SageMaker

- Built a hybrid search platform supporting semantic search, fuzzy matching, and synonym expansion.
- Implemented embedding-based retrieval and relevance ranking for large-scale content archives.

- Achieved low-latency search responses through intent-aware caching and query optimization.

Verso Publishing Platform

Tech Stack: React.js, Redux, GraphQL, SSR, TypeScript

- Contributed to a multi-tenant publishing platform supporting multiple Condé Nast brands.
- Developed reusable components, state management solutions, and GraphQL integrations.
- Improved rendering performance through server-side rendering and frontend optimizations.

ReachShip

Tech Stack: Golang, Node.js, MongoDB, Redis, AWS, REST APIs

- Developed shipping and fulfillment automation services integrating multiple carrier providers.
- Implemented real-time rate calculation, label generation, shipment tracking, and return workflows.
- Built scalable backend services supporting domestic and international shipping operations.

E-Commerce Management System

Tech Stack: Node.js, Golang, Python, Express.js, MongoDB, Redis, REST APIs

- Designed and developed scalable APIs for product, order, inventory, and payment management.
- Implemented authentication, authorization, and caching mechanisms.
- Supported high-volume transaction processing and administrative workflows.

Education

CSVТУ Bhilai (Chhattisgarh)

April 2021

B.Tech (ETC)

Certificates

Full Stack Development Certification – JSpiders

May 2021 - Jan 2022
