DATA ENGINEERING LEADER | SNOWFLAKE | AZURE DATA LAKE | ENTERPRISE DATA PLATFORMS

PROFESSIONAL SUMMARY

Data Engineering Leader with 14+ years of experience designing, modernizing and operating large-scale enterprise data platforms across Snowflake and Azure environments.

Strong architectural and operational depth in Medallion architecture (Bronze/Silver/Gold), large-scale data migration (500+ TB), RBAC implementation, masking policies and performance optimization.

Experienced in managing distributed data engineering teams (25+ members), driving SLA adherence, code and design reviews, batch optimization and cross-functional stakeholder alignment.

Proven ability to bridge business requirements with scalable technical implementation while maintaining data integrity, governance and cost control.

Led multi-year US onsite engagements with major insurance and retail clients, collaborating with Marketing, Finance, R&D & Operations stakeholders to build domain-aligned data solutions.

CORE COMPETENCIES

Data Platform s Architecture

- Snowflake Data Warehouse Architecture
- Medallion Architecture (Bronze / Silver / Gold)
- Azure Data Lake (ADLS) ingestion patterns
- Large-scale Data Migration C Validation
- Enterprise Data Modeling (Star Schema, SCD Type 2)
- Warehouse sizing C performance tuning

ETL / ELT s Processing

- StreamSets

- Informatica PowerCenter
- SQL-based transformations
- Unix-based batch processing
- Incremental ingestion design

Governance s Security

- Snowflake RBAC implementation
- Column-level masking policies (PII)
- Metadata-driven governance controls
- Environment segregation (Dev / Pre-Prod / Prod)

Leadership s Delivery

- 25+ member data engineering team leadership
- Onshore–Offshore coordination
- SLA definition and job-level monitoring
- JIRA-based delivery tracking
- Performance optimization C issue resolution

TECHNICAL SKILLS

Programming: SQL (14+ years), Python (working knowledge), Unix Shell

Data Platforms: Snowflake, Azure Data Lake, AWS Services

ETL Tools: StreamSets, Informatica PowerCenter

Databases: Snowflake, IBM DB2, IBM Netezza, Oracle, MySQL

BI Tools: Power BI, Tableau, MicroStrategy

Certifications:

- SnowPro Core (COF-C02)
- Agile Certified
- Pursuing Gen AI and Agentic AI certification/course from IIT Madras.

PROFESSIONAL EXPERIENCE

ACCENTURE SERVICES PVT. LTD.

July 2011 - Present

Solution Tech Architect / Data Engineering Lead

IBM Netezza → Snowflake Migration | US Retail Client (Los Angeles) | Jul 2024 – Present

- Designed end-to-end Snowflake data platform architecture using Azure Data Lake (Bronze) and Snowflake (Silver/Gold).
- Built ingestion framework using StreamSets to load data from databases, files, real-time feeds and Hadoop sources into Azure.
- Implemented incremental ingestion logic (SCD Type 2) for maintaining historical accuracy.
- Led migration of ~560TB historical data using Azure Data Box and metadata-driven delta synchronization.
- Structured Snowflake environments (Dev, Pre-Prod, Prod) with controlled warehouse sizing per workload.
- Implemented RBAC and column-level masking policies to secure PII data.
- Optimized long-running batch jobs through SQL profiling and warehouse resizing.
- Designed metadata-based validation approach using analytical comparisons (min/max/sum/avg) to ensure data consistency.
- Coordinated onshore and offshore teams to ensure delivery reliability and SLA adherence.

Associate Manager / Data Engineering Lead

Enterprise Data Engineering Release | Nov 2022 – Jun 2024

- Led distributed data engineering team delivering Snowflake-based enhancements.
 - Reviewed ETL design and transformation logic to ensure performance and scalability.
 - Defined job-level SLA monitoring and failure escalation protocols.
 - Introduced structured JIRA tracking to improve delivery transparency.
 - Improved batch performance through SQL optimization before scaling compute.
-

Team Leader – Snowflake Migration

Dec 2020 – Oct 2022

- Designed target-state architecture for IBM DB2 → Snowflake migration.
 - Established data modeling standards and enforced surrogate key integrity.
 - Implemented warehouse usage segregation (small for business users, medium/large for batch jobs).
 - Defined performance thresholds and investigated execution variance across jobs.
-

Earlier Roles (2011 – 2020)

Senior Software Engineer / Application Development Analyst □

Developed enterprise-scale ETL pipelines using Informatica.

- Built data marts supporting analytics and reporting workloads.
 - Automated Unix-based batch processing frameworks.
 - Provided production support and release management.
-

LEADERSHIP s IMPACT

- Managed 25+ data engineers across ETL, batch and validation streams. □
Restructured team assignments based on performance tracking.
 - Reduced batch inefficiencies through structured profiling and targeted optimizations.
 - Implemented masking governance checklist to prevent unauthorized PII exposure.
 - Ensured 95%+ job success rate across migration pipelines.
-

EDUCATION

B.Tech – Computer Science
NMIMS University, Mumbai (2011)
