Total Experience

14 Years in as Data engineering Lead/ Manager, Cloud Migration Lead, Python Automation Architect.

Work History

Accenture, India

July 2021 - Till Date

InfoCepts Technologies

Mar 2019 - July 2021

Barclays, India

Sep 2018 - Mar 2019

Accenture, India

Apr 2015 - Sep 2018

IBM, India

Oct 2014 - Apr 2015

Wipro Technologies, India

Nov 2011 - Oct 2014

Education

Qualification

B.S Computer Science (2011)

Summary and Accomplishments

- Enterprise Data Architecture and Data Engineering Leader with 14+ years of experience delivering platform-agnostic, cloud-native data solutions across banking, insurance, payments, and large enterprise environments. Proven expertise in data modelling, data migration, metadata management, data quality, and governance within modern lakehouse and enterprise data platforms
- Expertise in pyspark, SQL, Python, Cloud migration, python automation, ETL, bigdata Development.
- Strong experience in Full Life-cycle BI and Data warehousing projects inclusive of requirements analysis, proof-of-concepts, design, development, testing and implementation.
- Strong experience in Salesforce and Informatica integration projects and bigdata to AWS migration project.
- Experience as DevOps and MLOps Engineer on GCP platform for building vertex AI pipeline.
- Strong experience in working on big data technologies and cloud components/ services.
- Hands on using CICD pipelines (Jenkins and GIT, bitbucket, git actions)
- Experience into api automation using karate framework, python, and gatling.

Technical Skills

Primary Skills

ETL Engineer, Data Engineer, Python Automation.

Big data and Cloud Technologies

Hadoop, HDFS, Hive, pyspark, AWS athena, EMR, S3, RDS, RedShift, GCP GCS, DataFlow, DataProc, GKE, pyspark, databricks, glue, airflow.

BI Tools

MicroStrategy, Tableau

ETL & other tools

Informatica Power Center, IICS, Karate, python automation, Kafka, GitHub, Git actions, Jenkins, Spinnaker, Terraform.

Databases

Oracle, memsql, DB2, SQL server, Snowflake, Big Query, Data Bricks, RedShift

Project Management Tools

Azure DevOps, Quality Center, JIRA, ALM

Certifications

- Databricks Certified Data Engineer Professional
- Google Cloud Certified – Professional Cloud Data Engineer
- Google Cloud Certified – Professional Cloud DevOps Engineer
- Amazon Web Services (AWS) Certified Data Engineer Associate
- Databricks Certified Data Engineer Associate
- SnowPro Core Certification
- Amazon Web Services (AWS) Certified Solution Architect - Associate
- Google Cloud Certified Associate Cloud Engineer
- SAFe 6 Product Owner / Product Manager
- AWS Certified Cloud Practitioner

Project Profiles

- Microsoft Certified: Azure Fundamentals
- Salesforce Certified Service Cloud Consultant
- Salesforce Certified Business Analyst and Administrator

Project Details

American Express

Organization

Accenture, India

Role

Associate Manager (Lead Data Engineer)

Responsibilities

- As Data engineering lead, designed architecture for batch applications, data extracts, loading strategies, cleansing, data quality and profiling
- Directed a team of data engineers in building and optimizing data pipelines, ensuring data accuracy and efficiency.
- Working with the stakeholders to understand migration requirements for the source systems, and business usecase and analytics reports.
- Responsible for the end-to-end development on GCP platform, code conversion, dag setup and scheduling.
- Developing processes in Spark, Writing complex SQL queries, Building ETL/data pipelines
- Integrate workflows and pipelines with CI/CD systems, ensuring smooth automation of build, test, and deployment processes.
- Signoff and prod deployments, prod parallel and cutover.

Project Details

Mondelez Food Safety Program

Organization

Accenture, India

Role

Associate Manager (Lead Data Engineer,)

Responsibilities

- As Data Bricks Data engineer lead, designed architecture for batch applications, data extracts loading strategies, cleansing, data quality and profiling
- Directed a team of data engineers in building and optimizing data pipelines, ensuring data accuracy and efficiency.
- Working with the stakeholders to understand requirements for the source systems, and business usecase and analytics reports
- Utilizing medallion architecture and unity catalog for development.
- Responsible for the end-to-end development on data bricks platform, workflow setup and scheduling.
- Developing processes in Spark, Writing complex SQL queries, Building ETL/data pipelines
- Integrate workflows and pipelines with CI/CD systems, ensuring smooth automation of build, test, and deployment processes.

Project Details

Lloyds Banking Group MDL Cloud Migration

Organization

Accenture, India

Role

Associate Manager (Lead Data Engineer, MLOps Engineer)

Responsibilities

- As Data Engineer Lead designed architecture for streaming applications, data extracts and data catalog for Hadoop to GCP migration.
- Directed a team of data engineers in building and optimizing data pipelines, ensuring data accuracy and efficiency.
- Working with the stakeholders to understand requirements for the data platform and code migration. Involved in Infra architecture, Configuring GKE, databases and other services to run the application.
- Responsible for the end-to-end operational management of cloud data platform, adhering to required data management and governance practices
- Developing processes in Spark, Writing complex SQL queries, Building ETL/data pipelines
- Monitoring issues and makes updates to keep stream apps running smoothly. Data validation and platform validation between Big Data platform GCP environment, creation of automation scripts for GCP environment for validations, deployment of the newly build jobs on GCP environment from using Jenkins & spinnaker pipeline
- Creation of automated job for data validations between the tables using BDD framework.
- Worked as a MLOps Engg, Design, develop, monitor, and maintain end-to-end ML pipelines, including data ingestion, preprocessing, feature engineering, model training, evaluation, and deployment. Collaborate with Engineering architects to build scalable pipelines for ML driven

features.

- Integrate ML pipelines with CI/CD systems, ensuring smooth automation of build, test, and deployment processes. Manage infrastructure resources for ML pipeline deployment on GCP platform. Collaborate with Product Managers, Data Scientists and other stakeholders to deploy models that drives key features of the product
-

Project Details

AXA France

Organization

Accenture, India

Role

Associate Manager (Data Migration Lead and Salesforce BA)

Responsibilities

- As a Migration Lead, worked on shaping data, infrastructure, ensuring its efficiency, scalability, and Design and implement data architecture strategies that support the Data Migration initiatives.
 - Ownership of solution design that meets the objectives. Develop and maintain cloud-based data solutions using AWS and DataBricks platform. Created and manage ETL processes to move and transform data from various sources into a structured format for analysis. Worked with analysts to understand data sources, and attributes, and devise mechanisms for ETL.
 - Utilize SQL and Python for data processing, analytics, and tableau for data visualization and reporting. Implement, manage, and optimize ETL platforms, ensuring data integration and transformation processes are efficient and error-free
 - Implement Salesforce as Case Management System (Service Cloud) for two business lines and in multiple geographies in the insurance branch.
 - Handle and arbitrate on functional topics in order to identify new CMS features as well as defining target agent processes that meet business needs.
 - The link between business and development team to identify, define and validate user stories, make sure that user stories meet the business requirements, Align with Product Owners on common and priority requirements.
 - Write, prioritize and maintain the product backlog according to business requirements and the delivery capacity.
 - Lead sprint planning and participate to agile rituals. Dependency management with other Global Assets. Identifying data dependencies between assets.
-

Project Details

NBC Universal

Organization

InfoCepts Technologies

Role

ETL Project Lead

Responsibilities

- Involved in release planning, requirement understanding, detail level estimations, task distributions
 - Gathering information of all the data processing jobs like source, target tables, impacted reports
 - Developing processes in Spark, Writing complex SQL queries and building ETL/data pipelines for data lakes and Datawarehouse.
 - Creation of automated test cases for data validations between the tables using Pyspark
 - Managing the provision of data sets and tools for business data analysis and analytics
 - Develop a variety of database query and visualization tools to identify and understand platform issues or events
 - Provide technical expertise in extraction, integration, and analysis of critical data
 - Involved in production parallel testing till the AWS environment is live
 - Involved in closure and cleanup activity after release
 - Involved with client communication for status calls
-

Project Details**Mule Accounts****Organization****Barclays****Role****ETL Engineer****Responsibilities**

- Data Load Specification, Sprint planning, Requirement Gathering and Requirement analysis.
- Resolving Requirement related issues and Vendor management.
- Creating Source to target mapping on top of business requirement.
- Designed Mock-up, Created LDM and Physical warehouse schema.
- Created ETL mappings, workflows and stored procedures.
- Prepared test cases for the target database, defined and created MicroStrategy objects including attributes, filters, metrics, hierarchies, custom groups and reports

Project Details**Pacific Life,****TD Bank, MFS****Organization****Accenture, India****Role****Sr. Software Engineer****Responsibilities**

- Offshore project lead
- Prioritized the tickets and assigned them to the offshore team
- Kept track of the status and sent weekly reports to the client
- Prepared monthly retrospective deck
- Requirement gathering for small development from business users
- Informatica production support and monitoring
- Informatica jobs monitoring and fixing the replication issues
- Jitterbit production support and monitoring
- Worked on change requests and enhancements
- Resolved the batch failures and Investigated the issues and fixed the failures

Project Details**miRevenue****Organization****IBM****Role****Sr. Software Engineer****Responsibilities**

- Worked on data quality of a middle ware system primarily validating source file (unix) data dump to a table with some transformations
- Development and execution of test cases for various business scenarios
- Furnishing accurate test results, defects, and evidence in ALM/QC by precisely following standard QC hygiene, has been well appreciated by the stake holders
- Estimation of work duration for project explicitly for each test phase and tracking the same for entire application to ensure there in no breach of the service level agreement

Project Details**Barclays, Credit Suisse****Organization****Wipro Technologies****Role****Project Engineer****Responsibilities**

- Creating and executing System test cases and User acceptance test cases
- Test Environment setup
- Running the Informatica workflows and execute Batch jobs/Shell scripts with the help of Control-M and UNIX
- Data Reconciliation between source & target.
- Monitor the database CPU and Memory utilization (using UNIX and database logs) and Response time to complete each process. Data validation analysed data prepare report/results and sent it to client.

Personal Profile

Marital Status : Married
Languages : English, Hindi, Marathi
Address : Gayatri Nagar, Nagpur, Maharashtra - 440022
