SUMMARY

Senior Backend Engineer with 7+ years of experience designing and scaling high-traffic systems with **Node.js, TypeScript, Python and AWS**. Strong in **microservices, event-driven architecture, serverless, CI/CD, and observability**. Hands-on with **AI/ML integration** for decisioning, dynamic pricing and recommendations; comfortable leveraging **AI developer tools (Cursor, Copilot)** to improve quality and velocity. Proven business impact: higher sign-ups, conversions, and revenue uplift on consumer platforms.

TECHNICAL SKILLS SUMMARY

Programming: JavaScript, TypeScript, Go, Python, SQL, GraphQL, WebSockets

Frameworks: Node.js, Express.js, NestJS, LoopBack, Flask, React

Cloud & DevOps: AWS (Lambda, API Gateway, EC2, S3, DynamoDB, CloudFront, ECR, CloudWatch, Athena), Docker, Kubernetes, Argo CD, GitHub Actions

Data Stores: PostgreSQL, MySQL, MongoDB, Cassandra, Redis, Elasticsearch

Messaging & Data: Kafka, RabbitMQ, Airflow

Observability & Marketing: Datadog, Kibana, GA4, Segment, Braze

AI/ML: Model integration (risk scoring, recommendations), TensorFlow, scikit-learn, LangChain, OpenAI API, LLM orchestration

Practices: Microservices, Serverless, Event-Driven, CI/CD, Testing, Security Hardening (2FA, account lockout)

PROJECT SUMMARY

AI-Powered Real-Time Interview Scheduling Agent — Senior Software Developer

Organization: EPAM (Client: Atlassian) — Remote

Environment: LlamaIndex, Anthropic Claude API, Node.js, Redis, WebSockets, Google Calendar API, Microsoft Outlook Calendar API

Description: Developed a **real-time scheduling agent** integrating **LlamaIndex** with Google and Outlook calendar APIs. Integrated an **intelligent conversational agent** that automatically resolves time-zone conflicts, reschedules dropouts, and delivers automated pre-interview reminders.

Roles & Responsibilities:

- Built real-time multi-calendar scheduling workflows with automated conflict resolution and rescheduling.
 - Automated **90% of manual recruiter coordination tasks**, reducing interview dropouts/no-shows by **30%**.
 - Implemented conversational scheduling using **LlamaIndex** and **Anthropic Claude API**, with **Redis** and **WebSockets** for low-latency state and real-time updates.
-

Loan Decision Management System (Personal & Corporate Lending) — Senior Software Developer

Organization: Emirates National Bank Dubai (D4Insight) — Remote | **Mar 2025 – Present**

Environment: Node.js (TypeScript, Nest/Express), Microservices, AWS, PostgreSQL/DynamoDB, Kafka/RabbitMQ, Docker, GitHub Actions, Datadog

Description: Built a **fault-tolerant decisioning platform** orchestrating multiple **AI/ML models** for credit-risk based on repayment patterns and behavioral data; enabled real-time approvals with explainability and continuous-feedback loops.

Roles & Responsibilities:

- Designed microservices with **saga/outbox** patterns for reliable workflows.
 - Implemented **model orchestration** (inference routing, retraining hooks, feedback capture).
 - Automated compliance checks with **LLM-driven document parsing**.
 - Established **observability** (tracing, logs, metrics) and **CI/CD** for safe rollouts.
-

Sendhelper App Revamp (Consumer Services Platform) — Senior Software Developer

Organization: PropertyGuru (Sendhelper) — Bengaluru | **Aug 2023 – Mar 2025**

Environment: Node.js, TypeScript, Express/NestJS, AWS (Lambda, S3, DynamoDB, CloudWatch), Redis, PostgreSQL, Braze, Datadog, GitHub Actions

Description: Led backend revamp delivering **+35% sign-ups** and **+19% conversion**; built **AI-driven dynamic pricing & demand forecasting** resulting in **+34% off-peak revenue**, plus **recommendation modules** from behavior data.

Roles & Responsibilities:

- Re-architected critical services for **scalability & reliability**; added **2FA & lockout**.
 - Integrated **Braze** for lifecycle automation & analytics.
 - Used **Cursor/Copilot** to uplift code quality and delivery speed.
-

Paytm Travel – Booking & Automation — Software Developer

Organization: Paytm — Bengaluru | **Dec 2021 – Aug 2023**

Environment: Node.js, TypeScript, Micro-apps, RabbitMQ/Kafka, Redis, PostgreSQL, Docker, CI/CD

Description: Built OTP Booking and Cancellation Protect modules; automated **75% of manual workflows**; migrated a monolith to modular micro-apps, improving deployment velocity; launched Resume Booking to rehydrate abandoned flows (**+10% retention**).

Roles & Responsibilities:

- Event-driven integrations and resilient workflows with retries & DLQs.
 - API hardening, caching, and performance tuning under peak loads.
-

Enterprise Platforms (Survey Cert & Loan Processing) — Senior Software Engineer

Organization: Infosys — Bengaluru | **Aug 2018 – Jun 2021**

Environment: Node.js/Express, Redis, SQL, React (frontends), CI/CD

Description: Rebuilt Caterpillar Survey Certification backend for reliability/perf; developed loan processing platform improving TAT and throughput; enhanced CI/CD for React & Node for deployment stability and QA.

Roles & Responsibilities:

- Designed APIs, caching layers, and DB optimizations.
 - Strengthened CI/CD pipelines and automated testing.
-

EDUCATION

B.Tech, Computer Science & Engineering — JSS Academy of Technical Education, India (2014–2018)

KEY ACHIEVEMENTS

- **Business Impact:** +35% user acquisition, +19% conversions, +34% revenue uplift via dynamic pricing.
 - **Architecture Modernization:** Legacy → microservices/serverless, 99.9% uptime maintained.
 - **AI in Production:** Credit-risk scoring, dynamic pricing, recommendations; AI-assisted coding adoption.
-

LANGUAGES

English (Fluent), Hindi (Native)
