

Vamshi Nath Vunnam

Software Engineer II | Full-Stack .NET / Angular / SQL | AI Automation Specialist
vamshinathc@gmail.com | linkedin.com/in/vamshinath-vunnam | Hyderabad, India (Open to Remote)

TECHNICAL SKILLS

Languages & Frameworks

C# . ASP.NET Core . .NET Standard . VB.NET . TypeScript . Angular . SQL . Python . HTML/CSS

Databases & Search

SQL Server . Elasticsearch . PostgreSQL . Oracle

Cloud & DevOps

AWS (ECS, S3, Lambda, EC2) . Docker . Kubernetes . Azure DevOps . GitHub Actions . JFrog

AI & Automation

Claude Code . Cline . GitHub Copilot . RAG . LLM Integration . AI Agent Development

MCP Servers

Azure DevOps . GitHub . Datadog . Playwright . SQL Server . Saffron Design

Observability & Tools

Datadog . Postman . Jira . Power BI . DBeaver . Swagger

CERTIFICATIONS

- AWS Certified Developer – Associate | 2020
- AI/ML Upskilling Program | Thomson Reuters | 2024

KEY HIGHLIGHTS

- Promoted to SE II — Mar 2026
- Far Exceeded Rating — 2025
- 2x AI Hackathon Winner (2024)
- Zero CIEs — DPS 25.3 Release
- Spotlight Award Recipient
- Led GTM's 1st Product Extraction
- Serving 350+ Enterprise Clients

EDUCATION

B.Tech — Electronics & Communication Engineering

VIT University, Vellore
2017 | CGPA: 8.45 / 10

PROFESSIONAL SUMMARY

Full-stack Software Engineer with 8.5 years of experience building enterprise .NET/Angular/SQL systems, specialising in AI-powered developer automation. At Thomson Reuters, led GTM's first large-scale product modernisation and built a complete AI workflow platform — 6 custom Claude Code agents integrating 6 MCP servers — automating release orchestration across 13 repositories, QA test generation, production root-cause analysis, and enterprise PR reviews. Open to senior engineering, tech lead, and AI tooling roles at remote-first companies.

EXPERIENCE

Thomson Reuters

Software Engineer II (Promoted Mar 2026) | Nov 2021 – Present
OneSource Global Trade Management . Denied Party Screening (DPS) . Hyderabad, India

Leadership & Product Ownership

- Led GTM's first large-scale product extraction: migrated DPS from monolithic .NET Framework 4.7.2 (VB) to ASP.NET Core/.NET Standard (C#) on AWS ECS containers — delivered with zero Customer Impacting Events at launch, now serving 350+ global enterprise clients processing millions of screenings daily
- Promoted to Software Engineer II (Mar 2026); acting Dev Lead for 6+ months owning sprint planning, architectural decisions, and cross-functional coordination across engineering, QA, DevOps, and stakeholders
- Architected independently deployable, containerised DPS platform eliminating GTM release coupling and enabling serverless cost optimisation through elastic scaling to zero during low-activity periods

AI Automation & Developer Productivity

- Built 6 production-grade Claude Code agents: NuGet version orchestration across 13 repos with automated ADO pipeline chaining (37->229->216->59); QA test case generation from ADO work items via Playwright MCP + SQL MCP; production root-cause analysis via Datadog MCP log correlation; enterprise PR reviews integrating GitHub MCP, SQL Server MCP, and Saffron MCP
- Integrated 6 MCP servers (Azure DevOps, GitHub, Datadog, Playwright, SQL Server, Saffron) into team-wide workflows, automating repetitive engineering tasks and significantly reducing manual overhead
- Built RAG-based chatbots and an AI Anomaly Detection tool for DPS monitoring; collaborating with GTM Garage on an AI solution to eliminate vendor RNI plugin dependency
- Won Best Pitch at CT&T AI Hackathon and Global AI Hackathon challenge winner (2024); participated in 2025 Global AI Hackathon building Angular-to-React AI migration agent
- Delivered AI training workshops on Claude Code, MCP integrations, and AI-assisted development; drove team-wide adoption of AI tooling across the engineering organisation

Engineering Excellence

- Achieved zero CIEs in the 25.3 release; resolved all P1/P2 issues within SLA throughout tenure; fixed long-standing AT&T batch processing failures affecting millions of nightly screening transactions
- Streamlined RNI plugin deployment from manual process to S3-based API workflow, reducing effort across all environments and handing off operations to the Release Management team
- Delivered DPS features: batch monitoring, spreadsheet uploads, graylist management, AWS Translate integration, and cross-language tuning for enterprise clients including Costco and AT&T
- Received multiple Thomson Reuters recognition awards (Ignite, Shine, Transcend) for production issue resolution, after-hours support, and cross-team contributions

Cognizant Technology Solutions

Associate – Software Engineer | Oct 2017 – Nov 2021

*Client: Cargill Risk Management & Trade Applications . .NET Core / Angular / PostgreSQL .
Chennai, India*

- Led Level I/II error analysis and resolution for 9 cloud-hosted microservices (.NET Core, Angular, PostgreSQL) using Datadog and Kubernetes; served as technical lead for offshore team
- Delivered enhancements and production deployments for Customer Facing and Technical Services .NET applications serving Cargill's global agribusiness operations
- Automated data reporting workflows using Power BI, PostgreSQL, and SQL Server; presented performance dashboards to leadership — earned "Exceeds All Expectations" rating from Cargill account
- Earned AWS Certified Developer – Associate certification (July 2020) during tenure
