

Venkata Suresh Addagada

AGENTIC AI & GENAI PROJECT MANAGER | AI Transformation | BFSI | Core Banking | AI Quality Engineering | RAG | MCP

📍 Hyderabad, India | 📞 +91 – 6302721244 | ✉️ mailtosuresh194@gmail.com

Professional Summary

Agentic AI & GenAI Project Manager with **14+ years** of BFSI technology and transformation experience, specializing in AI-led quality engineering, Core Banking modernization, Digital Banking, software delivery, test automation, data migration, and enterprise transformation.

Experienced in leading and coordinating Agentic AI / GenAI initiatives from problem identification and requirements through solution design, AI-agent development, integration, evaluation, deployment, and production adoption.

Designed and delivered an **Agentic AI framework comprising 7 AI agents** that transforms BRDs and business requirements into Test Strategy, Test Plans, Test Scenarios, Test Cases, Automation Code, Execution, MCP/tool integration, Self-Healing, Root Cause Analysis, Test Coverage, and Test Generation Dashboards.

Integrated approximately **~2 TB of enterprise/client knowledge** into RAG-enabled AI workflows and achieved approximately **82% reduction in defects** and **70% savings in manual review effort** through AI-driven quality engineering and Human-in-the-Loop optimization.

Brings **4 years of Fiserv DNA and Q2 experience** across Core Banking and Digital Banking transformation, implementation, modernization, upgrades, integrations, and data migrations. Supported **6 banking transformation/migration projects**, large cross-functional teams of **70–142 professionals**, and deployments across **3 environments**.

Strong ability to bridge Business, Product, AI, Engineering, QA, Data, Architecture, Operations, and Client stakeholders, translating complex banking problems into practical, measurable Agentic AI solutions.

Core Competencies

Agentic AI & GenAI

Agentic AI • Generative AI • AI Transformation • AI Agents • LLM Applications • RAG • Agent Orchestration • Multi-Agent Workflows • MCP • Tool Calling • Prompt Engineering • Context Engineering • Human-in-the-Loop • AI Automation

AI Quality Engineering

AI Test Strategy • Test Plan Generation • Test Scenario Generation • Test Case Generation • Automation Code Generation • Test Execution • Self-Healing Automation • Root Cause Analysis • Test Coverage • AI Evaluation • Quality Engineering • Defect Prevention • AI Test Dashboards

Project & Program Management

AI Project Management • Technical Project Management • End-to-End Delivery • Project Planning • Roadmaps • Sprint Planning • Agile Delivery • Risk Management • Dependency Management • Stakeholder Management • Resource Planning • Vendor Management • Status Reporting • Release Management • Production Readiness

AI / Data / Evaluation

RAG • ~2 TB Enterprise Knowledge • DeepEval • Observability • AI Evaluation • Groundedness • Context Relevance • Quality Metrics • Data Layer • Business Rules • Data Validation • Knowledge Management

Technology & Integration

React • Backend Services • REST APIs • Databases • API Integration • Git • Slack • MCP • Tool Integration • Data Layer • Business Rules • System Integration

DevOps / Deployment

Docker • Containerization • Cloud Models • Local Models • Development • SIT • UAT • Production • Environment Deployment

BFSI Transformation

Core Banking • Digital Banking • Lending • Payments • Trade Finance • Treasury • Cards • Data Migration • Banking Modernization • Integration

Professional Experience

ValueMomentum

Agentic AI & GenAI Project Manager | BFSI Transformation *Client: America First Credit Union, USA* |
[DATES]

Agentic AI Project Leadership

- Lead and coordinate Agentic AI / GenAI initiatives focused on software quality engineering, banking transformation, automation, defect prevention, and delivery optimization.
- Drive AI initiatives across the lifecycle from business problem identification → requirements → solution design → agent architecture → development → integration → evaluation → deployment → adoption.
- Designed and implemented an Agentic AI quality engineering framework connecting BRDs and business requirements with automated test planning, test generation, execution, analysis, and reporting.
- Led the development of **7 specialized AI agents** supporting requirements analysis, Test Strategy, Test Planning, Test Scenario generation, Test Case generation, Automation Code generation, execution analysis, Self-Healing, RCA, coverage, and reporting.
- Established the end-to-end AI workflow:

BRD → Requirement Analysis → Test Strategy → Test Plan → Test Scenarios → Test Cases → Automation Code → Execution → MCP/Tools → Self-Healing → RCA → Test Coverage → Evaluation → Dashboard
- Coordinated teams across AI Engineering, QA, Development, Architecture, Data, Business, Product, DevOps, and Client stakeholders to ensure successful delivery of Agentic AI capabilities.
- Defined project objectives, milestones, dependencies, deliverables, quality gates, risks, and acceptance criteria for AI initiatives.
- Coordinated AI solution development across React frontend, backend services, databases, RAG, agent orchestration, model integration, tool connectivity, evaluation, observability, and deployment.
- Facilitated technical and business discussions to translate complex banking problems into actionable AI use cases.
- Established Human-in-the-Loop governance, ensuring clients review critical exceptions and high-impact decisions while AI agents handle repetitive analysis and validation.

AI Quality Engineering Transformation

- Directed implementation of AI-assisted testing workflows capable of converting BRDs into Test Strategy, Test Plans, Test Scenarios, Test Cases, and Automation Code.
- Coordinated AI-generated automation assets including Feature Files, Page Object Models, Step Definitions, and executable automation workflows.
- Implemented AI-assisted test execution, failure analysis, self-healing automation, Root Cause Analysis, and test coverage analysis.
- Established AI-driven quality workflows to identify gaps between requirements, business rules, generated tests, executed tests, and defects.
- Developed test-generation and quality dashboards providing visibility into test creation, execution, coverage, defects, AI evaluation, and quality metrics.
- Coordinated AI evaluation activities using DeepEval and observability mechanisms to measure relevance, groundedness, coverage, response quality, and agent performance.

RAG / Enterprise AI Knowledge

- Led integration of approximately **~2 TB** of enterprise/client knowledge into RAG-enabled Agentic AI workflows.
- Defined knowledge requirements and coordinated ingestion of BRDs, FSDs, functional specifications, business rules, testing artifacts, and domain documentation.
- Established RAG-based workflows to ensure AI-generated outputs are grounded in relevant enterprise and banking knowledge.
- Coordinated data-layer and conditional business-rule workflows controlling how information is retrieved, validated, transferred, and consumed by AI agents.

MCP / Tool & System Integration

- Coordinated integration of MCP (Model Context Protocol) and tool-enabled workflows into Agentic AI solutions.
- Integrated AI workflows with enterprise tools including Git and Slack.
- Coordinated integration across APIs, backend services, databases, data layers, enterprise applications, and AI models.

- Evaluated cloud-hosted and local model approaches based on project requirements including security, performance, scalability, latency, and cost.

AI Deployment & Delivery

- Coordinated containerization and deployment of AI components using Docker.
- Supported deployment across 3 environments and multiple project lifecycles.
- Coordinated release readiness, environment validation, testing, defect closure, stakeholder sign-off, and production deployment.
- Worked with technical teams to identify deployment dependencies and manage environment-related risks.
- Supported transition of AI solutions from development and experimentation into controlled enterprise delivery.

Key Business & Project Results

Metric	Result
Defect Reduction	~82% reduction through AI-driven requirements analysis, automated test generation, execution analysis, self-healing, RCA, and coverage optimization
Review Effort Savings	~70% savings in manual review effort through AI automation and targeted Human-in-the-Loop review
AI Agents Delivered	7 specialized AI agents supporting the software quality and banking delivery lifecycle
Enterprise Knowledge	~2 TB of enterprise/client knowledge integrated into RAG-enabled Agentic AI workflows
Banking Projects	6 implementation, modernization, upgrade, and data migration projects
Core Banking Experience	4 years of Fiserv DNA and Q2 Core/Digital Banking experience
Team Scale	Coordinated with programs involving 70–142 professionals across Business, Product, Engineering, QA, Architecture, Data, Operations, Vendors, and Clients

Deployment Environments	Supported project delivery and AI deployment across 3 environments
-------------------------	--

Fiserv DNA & Q2 — Core / Digital Banking Transformation

- 4 years of experience across Fiserv DNA and Q2 ecosystems.
- Supported Fiserv DNA → Q2 Core/Digital Banking transformation and migration initiatives.
- Coordinated business and technology activities across Online Banking, Commercial Banking, Mobile Banking, Domestic Payments, and International Payments.
- Managed requirements, integration dependencies, data migration activities, testing, defect resolution, and production readiness.
- Coordinated source-to-target data validation, reconciliation, business-rule validation, and migration testing.
- Supported SIT/UAT and production deployment activities across complex banking transformation programs.
- Coordinated cross-functional teams to resolve functional, integration, data, and environment-related issues.
- Orchestrated knowledge-sharing sessions and technical workshops to upskill cross-functional teams in GenAI solution adoption, fostering enterprise-wide AI competency and accelerating innovation cycles.
- Instituted a standardized AI change management process, enabling traceable updates to over 500 model artifacts annually while reducing update-related errors by 40%.

BFSI Domain Expertise

Domain	Platforms & Technologies
Core Banking	Fiserv DNA • Q2 • Temenos T24 • Oracle FLEXCUBE 14.7 • Infosys Finacle 10X • Intellect Design Arena • Finastra • Silverlake
Lending	Retail Lending • Corporate Lending • LOS • LMS • CLMS • Collections • Loan Origination • Loan Servicing

Payments	Domestic/International • Sweeps • Wires • Zelle • Wallets
-----------------	---

Technical Skills

Category	Skills & Tools
Core Banking Systems	FLEXCUBE • Finacle • T24 • Silverlake • Finastra • Q2 • Fiserv
Lending Suites	LOS • LMS • CLMS • Collections
Trade Finance	LC • Guarantee • Bills & Collections • SCF
Treasury	FX • Money Market • Derivatives • Bonds • Repo • Sukuk
Payment Systems	SWIFT • Wires • Zelle • ACH Payments • TPH • Domestic & Cross-border Payments
Reporting Tools	Power BI • Excel Macros • Oracle Reports
Documentation	BRD • FSD • TSD • Gap Analysis
Project Tools	JIRA • Confluence • SharePoint
SQL / Database	Oracle DB • PL/SQL (basic)
Integration & Middleware	ESB • APIs • Web Services
Languages	Python • Java
Automation Frameworks	Selenium • TestNG • BDD
LLM / AI	GPT • RAG • MCP Server • Claude AI
Cloud & DevOps Tools	Maven • Git • CI/CD • Docker • Snapshot • Backup
Backend	Putty • Teraterm • Classic • Services • Batches • COB
