

Venkata Subbamma

7780642391 | venkatasudhakurakula@gmail.com

PROFILE

- Full-Stack Engineer with around **5 years of experience** building scalable, high-performance web applications using **Go, Node.js, React, and TypeScript**. Specialized in designing **RESTful APIs, event-driven systems with Apache Kafka**, and **RBAC permission IAM** for secure, with strong expertise in **MongoDB, MySQL PostgreSQL** and backend system design. Experienced in developing modern frontend applications using **TanStack (Router, Query)**, Redux, Zustand, and component libraries like Material UI and shadcn/ui for performant, type-safe user interfaces. Proficient in building **containerized microservices** with Docker, implementing **end-to-end testing** (Playwright, Vitest), and establishing **observability** using **OpenTelemetry, Prometheus, and Grafana**. Actively learning on **GenAI-powered applications** using Python for data processing, workflow orchestration, and AI integrations.

SKILLS SUMMARY

Languages :	Golang , JavaScript, Python
Web Development :	HTML, CSS, Bootstrap, Material UI, Tailwind CSS , shadcn, tanstack
Frameworks :	Gin , React, , Node, Express Js, REST API, Next.js , API Testing
Database:	MySQL, MongoDB , PostgreSQL
AI ML :	RAG, OpenAI APIs, Embeddings, Gen AI
Developer Tools :	Git, Postman ,Swagger, VS Code , Cursor
Testing :	jest, Cypress , Playwright
Libraries :	Redux, React Router, Redux Toolkit , Tanstack , Zustand
DevOps :	AWS, S3, SQS, Docker
Observability :	Grafana, Prometheus, Loki, , OpenTelemetry

EXPERIENCE

Backend Developer

Mar 2025 – Present

Qylis Data | AI | Cyber Security

Hyderabad

- Evaln**, an enterprise-grade **AI inference platform** for on-premise and hybrid cloud deployments, spanning the **evaln** Inference plane (GPU gateway & node agents), control plane (IAM, orgs, marketplace, registry), and **evaln-client** web UI. Owned key modules end-to-end across API design, data modeling, and service integration, and contributed to architecture decisions on service boundaries, multi-tenant data flow, and deployment strategy.
- Built backend services in **Go (Gin)** across **evaln** and **AIBox** microservices, including an inference API gateway (**QGW**), node-level GPU agent (**QIA**), and control-plane REST APIs with **RBAC/IAM**..
- Delivered end-to-end product features in **aibox-client** using **React + TypeScript (TanStack Router/Query, Zustand, Zod, shadcn/ui)**, connecting org, project, marketplace, and GPU resource workflows to AIBox APIs. Integrated **OpenTelemetry, Prometheus, and Grafana** for distributed tracing and monitoring, and built a **Playwright** E2E framework to improve system visibility, reduce incident resolution time, and ensure repeatable cross-environment test coverage.

Software Engineer

Feb 2022 – Mar 2025

Nitya Software Solutions

Hyderabad

- Full-Stack Web Developer building scalable web applications using **JavaScript, Python, React.js, Go, Node.js, Express, MySQL, MongoDB**, and **Mongoose**; delivered end-to-end solutions including intuitive UI development with **Material UI** and seamless integration of external APIs.
- Led the development of **JobsnProfiles**, a hiring platform serving employers, placement agencies, and job seekers in the **US**; contributed to a **CRM application** using React and Node.js to enhance customer relationship management.
- Designed, implemented, and tested **RESTful APIs** for managing job listings, user profiles, and interactions using **Postman**; integrated **AWS S3 and EC2** for scalable storage and deployment, improving performance, security, and system reliability.

Full Stack Developer Intern

May 2021 – Nov 2021

10x Academy

Hyderabad

- Completed a structured **full-stack development internship program** at **10x Academy**, building **production-like applications** using **React, Node.js**, and **REST APIs**, while also working with **Golang** for backend services. Gained hands-on experience across **frontend and backend layers**, implementing features, API integrations, and contributing to **end-to-end system development**.

PROJECTS

- Eval(n)** | *Go, Gin, React, PostgreSQL, Docker, Zustand, TanStack,* Mar 2025 – Present
- Built and maintained **Go-based microservices** for an AI-driven inference platform (Evaln/AIBox), containerized with **Docker Compose** and deployed on **Kubernetes**, ensuring consistent environments.
 - Designed and implemented **scalable RESTful APIs in Go (Gin)** with clear contracts and modular architecture, incorporating structured error handling, and secure **RBAC permissions IAM** for multi-tenant access control.
 - Developed frontend features using **React + TypeScript (TanStack Router/Query, Zustand, Zod, shadcn/ui)**, integrating efficiently with backend APIs to maintain data consistency and improve user experience across workflows.
 - Built and integrated an **observability stack** using **OpenTelemetry, Prometheus, Grafana**, enabling distributed tracing and monitoring to improve debugging, system visibility, and performance analysis across APIs and **LLM workflows**.
 - Developed an **end-to-end testing framework with Playwright**, using reusable utilities and **JSON-based state management** to ensure reliable, maintainable, and repeatable test execution across environments.
 - Implemented **event-driven architecture with Apache Kafka**, handling message production and consumption with validation, retry mechanisms, and failure handling to ensure reliable asynchronous processing .
- DevPulse** | *React, Node, TypeScript, Tanstack, PostgreSQL, AWS, REST APIs,* Feb 2026 –Present
- Built **DevPulse**, an HR activity monitoring platform on **Node.js/Express, PostgreSQL, and AWS S3**, where a Windows PowerShell collector on employee machines sends hourly activity JSON via REST; full report payloads are stored in **S3** using date-partitioned object keys while searchable metadata and dashboard indexes live in **PostgreSQL**.
 - Implemented a **layered backend** (handler → service → repository) with **Snowflake IDs**, report upserts enforced by a **UNIQUE** employee/time-window constraint, consistent typed HTTP errors, and async **OpenAI** security analysis decoupled from the upload response through background jobs.
 - Designed a **hybrid AI scoring pipeline** that combines deterministic URL/domain tagging (personal messaging, job-hunting, entertainment) with LLM-based risk scoring (**risk_level, risk_score**, structured **findings[]**), using prompts, JSON-mode responses, and server-side validation before persisting results.
 - Shipped a **React (Vite)** HR dashboard using **MUI and TanStack Query**, featuring employee and report views with S3-backed detail access, an AI risk panel with status polling and manual re-run, plus **Docker Compose** orchestration and a Windows collector deployment bundle (Task Scheduler, **sqlite3**).
- JobsnProfiles** | *React, Golang, Express, Python, MySQL, Redux, Material UI, AWS, REST APIs* Feb 2022 – Mar 2025
- **JobsnProfiles** is a full-stack hiring platform serving employers, placement agencies, and job seekers in the **US**, enabling end-to-end **recruitment workflows** at scale.
 - **Architected** a responsive **React.js + Redux** front-end with **Material UI** components, improving rendering performance and UI consistency; integrated **third-party job listing and resume APIs** for **real-time data synchronization**.
 - Worked in **AI-powered resume parser** in **Python** leveraging **NLP techniques** to extract and structure candidate data (skills, experience, education), significantly improving **automation accuracy** in candidate screening pipelines.
 - **Designed RESTful APIs in Golang** for user authentication, resume retrieval, and job listing updates; documented all endpoints via **Swagger**, reducing integration issues and improving **cross-team API adoption**.
 - Conducted comprehensive **API testing** using **Postman** (functional, performance, tests), ensuring **reliability and uptime** of critical RESTful services across the platform.
 - **Designed and optimized MySQL schemas** for user profiles, resume data, and job listings, ensuring efficient **indexing**, fast **query performance**, and reliable data retrieval under **concurrent load**.
- Job Fair Tool** | *Golang, React, Redux Toolkit, PostgreSQL, AWS, REST APIs, Git* Mar 2023 – Jan 2025
- Led the development of a scalable **job fair platform** using **React** and **Golang**, enabling real-time interactions between job seekers and employers with a focus on performance and user experience.
 - Structured backend services around core domains (user, job, application, notifications) and developed key services in **Golang**, improving system clarity, enabling independent feature development, and supporting scalable API design.
 - Designed and optimized **high-performance RESTful APIs** using **Golang** and **PostgreSQL**, applying indexing, query optimization, and connection pooling to support high concurrency with low-latency responses.
 - Enhanced frontend performance using **React, Redux Toolkit**, and **RTK Query**, improving data fetching efficiency and reducing unnecessary re-renders.
 - Integrated **AI-driven features** such as personalized job recommendations and resume insights using external AI APIs to enhance user experience and relevance.

EDUCATION

Silver Jubilee College
Bachelor of Commerce and Computers

Kurnool
June 2019 – April 2022
