SUMMARY

Lead Data Scientist with 9+ years of experience specializing in predictive modeling, GenAI, RAG systems, computer vision, NLP and risk analytics. Experienced in architecting and deploying production-grade AI solutions that automate complex workflows, improve decision-making, and drive significant business value. Proven success delivering high-impact models across retail, manufacturing, fintech, and technology environments, with a strong focus on scalability, automation, and measurable outcomes.

TECHNICAL SKILLS

- | | |

WORK EXPERIENCE

Lead Data Scientist, Coromandel International Limited **Dec 2024 - Present**

- **Led the development of churn prediction models** for a major retail business, enabling targeted marketing campaigns that **reduced churn by 20%** and **generated ₹40 Cr** in incremental revenue.
- **Architected and implemented a phosphoric acid loss prediction system**, integrating model outputs into the Distributed Control System(DCS) and automating key process controls through reverse engineering. Achieved a **2% increase in throughput** and **7% reduction in losses**, contributing **₹150 Cr in revenue impact**.
- **Designed a RAG-based chatbot** for manufacturing plants' Document Management Systems, enabling natural-language search, automated document clean-up, assisted maintenance activity in plants and used for onboarding support as plants had high-attrition.
- **Developed an agent-based HR operations chatbot** with transactional capabilities (leave, attendance, travel) and policy query support, reducing HR workload and enabling expanded training initiatives that improved policy understanding and overall employee experience.

Senior Data Scientist, Uber **Feb 2021 - Dec 2024**

- **Designed GenAI-based test case generation models** using BRDs and ERDs, achieving **80% automation** of test cases with **95% accuracy**, significantly reducing manual QA effort
- **Built ML models** to classify bug reports by category, priority, and impact scope, enabling engineering teams to better triage issues and **improving overall bug resolution time by 10%**.
- **Developed sentiment analysis models** to assess merchant sentiment on Uber Eats across bug resolution, engagement, and onboarding workflows, providing actionable insights for product and support teams.
- **Created computer vision pipelines** to automatically extract menu items and pricing information from restaurant uploaded images and PDFs during onboarding, converting them into structured formats for downstream systems.

Data Scientist, 3LOQ Labs

Jan 2020 - Dec 2020

- **Led development of credit risk scoring models** using machine learning techniques, improving risk differentiation and supporting more accurate loan underwriting and capital allocation.
- **Built early-warning systems** to identify customers at risk of delinquency by analyzing transactional behavior, bureau data, income patterns, and macroeconomic indicators.
- **Built loan pre-approval and limit enhancement models** using alternate data and bureau insights, increasing approval rates while maintaining portfolio quality.

Data Scientist, Yash Technologies

Aug 2016 - Nov 2019

- **Designed a customer sentiment analysis platform** for a major food chain to evaluate product performance (top/low sellers) across store, region, and zone levels using customer reviews. Generated actionable insights on newly launched products by identifying sentiment patterns and customer preferences.
- **Automated multi-source data ingestion** (logs, sensor data, metadata) into Elasticsearch for a global digital broadcasting equipment manufacturer, improving data accessibility and operational visibility.
- **Built an anomaly detection pipeline** to identify transmission inconsistencies and reduce broadcasting loss, enhancing overall streaming quality and reliability.
- **Developed a demand forecasting engine** for a zinc manufacturing company using time series modeling and regression techniques, enabling better production planning and inventory optimization.

EDUCATION

B.E (Hons.) Electrical and Electronics Engineering

Aug 2012 - May 2016

Birla Institute of Technology And Science, Pilani (BITS Pilani)

Minors in Finance

Aug 2012 - May 2016

Birla Institute of Technology And Science, Pilani (BITS Pilani)

ADDITIONAL INFORMATION

- **Languages:**
 - English : Fluent
 - Hindi : Fluent
 - Telugu : Native
- Best Employee of the year 2018 - Yash Technologies
- Member of Innovative Team of the year 2022 - Uber
- Gold Medalist in Inter-School 100m, 200m, and 4x100m Relay
- Silver Medalist in Inter-School Volleyball
- Active Member of National Service Scheme (NSS)
