

VIKAS KUMAR SINGH

EXPERIENCE

November 2020 - Current

Associate Manager| PySpark Lead |Cloud Migration| Accenture Services Pvt. Ltd. | Bangalore

- Designed and executed scalable data pipelines using PySpark and Databricks on AWS (EMR), boosting data processing performance by 40% to enable real-time analytics and data-driven decision-making.
- Developed and maintained ETL workflows in AWS Glue, integrating data from multiple on-premises sources into centralized data repositories.
- Led a team of 12–15 data engineers, optimizing end-to-end data workflows and significantly improving overall processing efficiency.
- Collaborated closely with business stakeholders to define data requirements, ensure data accuracy, and maintain high data integrity standards.

Key Achievements

- Achieved a 40% reduction in data processing time by optimizing PySpark jobs and improving pipeline performance.
- Directed the migration of a legacy data warehouse to AWS, enhancing system scalability, reliability, and maintainability while realizing a 30% reduction in operational costs and streamlining cross-departmental migration activities.

June 2019 - October 2020

Data Engineering Lead| AZURE Data Engineer| Accenture Service Pvt. Ltd.

- Possess extensive Azure-based data engineering expertise, covering end-to-end management of data pipelines, production support, data modeling, and release management; successfully delivered 20 major releases with an 80% on-time delivery rate.
- Led Scrum-driven sprint teams, translating business requirements into precise user stories, coordinating development efforts, and ensuring high-quality deliverables with over 95% defect-free performance.
- Proficient in a wide range of Azure tools and services, including Azure Data Lake Storage (ADLS Gen2), Azure Virtual Machines, Azure Synapse Analytics (Serverless & Dedicated SQL Pools), Azure Data Factory, Azure Databricks, Azure Functions, and Power BI; highly skilled in Spark, Python, Scala, and workflow orchestration platforms such as Apache Airflow.

October 2017 - June 2019

Lead Analyst | CGI

Business Statement

The customer required a full migration of their on-premises data and analytics platform to a scalable cloud environment. The objective was to significantly enhance system performance, processing speed, and

SUMMARY

- **5+ years of expertise** designing and developing data applications using PySpark, AWS, Databricks, AWS Glue, S3, Athena, and Spark SQL within the Hadoop ecosystem.
- **14 years of total experience** across Azure, AWS, DataBricks, SnowFlake, Hadoop, Big Data, Power BI, Talend ETL, and production support, with strong skills in building and optimizing large-scale data pipelines.
- **Led a 12-member team**, managing project delivery, mentoring engineers, and ensuring high-quality, scalable data solutions.

SKILLS

- PySpark and Hadoop
- Python programming
- Cloud computing (Azure and AWS)
- Databricks expertise
- SnowFlake
- Problem solving
- Performance monitoring
- Data modeling
- Data migration strategies
- Airflow orchestration
- Project management
- SQL proficiency
- Jira management
- Machine learning fundamentals

delivery capacity while modernizing the existing data ecosystem.

Solution

We designed and developed a scalable, cloud-native data and analytics platform on Microsoft Azure. The solution included building reusable PySpark-based data processing frameworks and executing the end-to-end migration of workflows from the on-premises Hive environment to Azure services. Leveraged Azure Data Lake Storage (ADLS Gen2) for scalable storage, Azure Databricks for distributed processing, and Azure Data Factory for orchestrating ingestion and transformation pipelines.

October 2015 - October 2017

Senior Software Engineer| Wipro

- Gathered and analyzed business and technical requirements to design the overall data ingestion and transformation solution.
- Performed end-to-end data engineering activities, including ingestion, processing, transformation, and validation across the data lifecycle.
- Collected data from RDBMS sources using Sqoop and ingested it into HDFS for downstream processing.
- Developed and optimized Hive scripts, queries, and action workflows to implement transformation logic and ensure data quality.

June 2011 - October 2015

Production Support Engineer| Accenture Service Pvt Ltd.

- Developed ETL jobs using Talend Studio, performed unit testing, and deployed the jobs to the Talend Production Server following release management practices.
- Configured and monitored job scheduling through Control-M, ensuring timely execution, handling reruns, and managing job dependencies.
- Collaborated with Business, QA, and Operations teams to support testing, perform defect resolution, and ensure smooth deployment into production.

CERTIFICATIONS

- AWS Data Analytics Specialty
- AWS Certified Database - Specialty
- GCP Professional Data Engineer
- AZ-204: Azure Developing Solutions
- Databricks Professional Data Engineer

EDUCATION

2024

M Tech | Data Science & Data Engineering
BITS Pilani

2011

B TECH | Electrical & Electronics Engineering
Amrita University, India
