

Vinayaka R

📍 Bangalore, India ✉ vinayakar922@gmail.com 📞 91 9449393822 [in vinayaka-r-227175186/](https://www.linkedin.com/in/vinayaka-r-227175186/)

Professional Summary

Senior Network engineer with 6.5 + years of experience in Networking, cloud and infrastructure automation with expertise in network security with respect to routing, firewalls, VPNs, load balancer, automation using python and also integrating on-prem networks with cloud infrastructure.

Education

NIE Institute Of Technology, Mysuru
B.Tech, Electronics & Communications Engineering
◦ GPA: 6.5/10)

2015 – 2019

Sadvidya Preuniversity College , Mysuru
12th, State board
◦ Percentage: 83.16

2013 – 2015

Sri Bhakthanatha Swamy High School , Mandya
10th, State Board
◦ Percentage: 95.52

2003 – 2013

Experience

Oracle Cerner Healthcare Solutions
Senior Network Engineer

*Bengaluru, India
June 2022 -Present*

- As Part of the service delivery Network team, executed network deployments and infrastructure changes across multiple hospital environments in the US, ensuring minimal service disruption
- OCI & AWS Cloud : With the migration of technology to cloud from our legacy network infrastructure, built and optimized hybrid cloud connectivity and took up responsibilities on the cloud platforms such as OCI and AWS Have in depth knowledge on OCI, VCNs, NSGs, security lists, RPC peering, DRGs, Fast connects, VPNs Deployed and managed seclist updates, routing , VCN creations, DNS resolver updates, addition of ACLs in OCI Also worked on AWS troubleshooting with respect to connectivity between onprem and cloud as well as OCI.
- Deployed and managed seclist updates, VCN creations, DNS resolver updates, addition of ACLs in OCI Also worked on basic AWS troubleshooting with respect to connectivity between onprem and cloud as well as OCI.
- Worked on configuring and maintaining palo alto firewalls, Cisco routers, switches, and ASA firewalls, L2 and L3 including implementing NATs, ACLs, routing per the customer requirement and standards.
- Worked on F5 LTM load balancer and its various tasks include F5 service integrations such as addition and removal of Nodes to VIPs, creation of VIPs to accomplish server load balancing.
- Worked on the build and modification of site to site VPN tunnels with the third party vendors on Cisco ASAs
- Troubleshooting connectivity issues and various issues related to network devices.
- Palo Alto Cloud VPNs : Worked on setting up multiple site to site VPNs on the palo alto firewalls for vendors or third parties using AWS/Azure/GCP cloud infrastructure.
- Netscalers: Assisted in configuring and managing Citrix NetScaler load balancers for internal and client-facing applications.
- Worked on managing virtual servers, services, and service groups, setting up health checks and persistence policies.
- BGP : Configuring route filtering, prefix lists, and route-maps to control advertisement and import policies, configured BGP peering for hybrid AWS-on-prem connectivity

- Provided various knowledge trainings and was the POC and worked on multiple documentations as well as knowledge trainings of the various network tasks

Network Engineer

May 2021 – June 2022

- Worked on configuring and maintaining Cisco routers, switches, and ASA firewalls, Palo Alto firewalls including implementing NATs, ACLs, routing per the customer requirement and standards.
- Worked on F5 LTM load balancer and its various tasks include F5 service integrations such as addition and removal of Nodes to VIPs, creation of VIPs to accomplish server load balancing.
- Configuration of various VIP parameters, building out new client specific F5s, updating SSL standard certs and Client certificates on the F5s.
- Worked on the build and modification of site to site VPN tunnels with the third party vendors on Cisco ASAs
- Troubleshooting connectivity issues and various issues related to network devices.
- In addition to the service delivery tasks such as configuring ACLs, NATs, routes, Virtual servers and VPN configurations, took ownership of various projects and go live initiatives that helped hone my collaborative and leadership attributes.
- Worked in a project that involved firewall migrations from Cisco ASAs to Palo Alto implemented where NAT, routing, ACL policies and interface configuration had to be built out.
- Helped in configuring SNMP and multiple network devices throughout the infrastructure in collaboration with the monitoring teams.
- Configured basic routing protocols (OSPF, EIGRP, BGP) on our agg and CPE routers.
- Provided 12x7 weekday and weekend oncall support
- Worked with the dev teams in configuring a NAT automation self service tool for all NAT clients that will automatically login to the tool and perform the necessary configuration based on input using VRA tool.
- As a SME , mentored the team members on various technical concepts and troubleshooting.

Wipro

Mysuru,India

Network Engineer

Oct 2019 – April 2021

- As an Network Engineer in Wipro, I initiated my journey right from the networking basics and then hands-on experience with enterprise-grade Cisco infrastructure .
- Worked on performing NAT configurations on routers and firewalls Cisco routers and ASA firewalls.
- Supported enterprise networks across branch offices, data centers, and disaster recovery sites.
- Monitored network performance and health using HPNNMI, IMC, and Sapphire monitoring tools.
- Troubleshot routing, switching, and connectivity issues ensuring minimal business impact.
- Resolved escalated incidents and collaborated with technical teams to restore services quickly.
- Prepared network reports and supported operational maintenance and network upgrade activities.

Certifications

CCNA - Cisco Certified Network Associate

OCI Foundations Associate

Technical Skills

Routing & Switching: BGP, MPLS, OSPF, EIGRP, VLAN, STP, ARP Cisco IOS XR, Cisco ACI, L2, L3 Basics of: SDWAN, DHCP, DNS

Network Security: NAT, IPsec VPN, Firewall: CISCO ASA 55XX, 5585x (Version 8.x & 9.x). Palo Alto (PAN-OS 8.1), (Panorama – OS 9.1), F5 Big IP, Netscaler, IPS/IDS, ACLs, NATs, VPN

Cloud: OCI, AWS, Terraform deployments

Monitoring/Troubleshooting: SNMP, Zabbix, Wireshark

Documentation and Processes: Incident and Change Management, Jira, Confluence.

Major Projects:

Project: Cisco ASA to Palo Alto NGFW Migration

Overview:

This project involved migrating the organization's network security infrastructure from Cisco ASA firewalls to Palo Alto Networks Next-Generation Firewalls (NGFWs). The objective was to enhance network security, improve application visibility, strengthen threat prevention capabilities, and simplify firewall management while ensuring minimal downtime during the migration.

Key Responsibilities:

- Analyzed and reviewed the existing Cisco ASA firewall configuration, including access control lists (ACLs), NAT policies, VPN configurations, and security rules.
- Planned and executed the migration strategy by translating Cisco ASA policies into Palo Alto security policies using best practices.
- Configured security zones, interfaces, virtual routers, NAT rules, security policies, and service objects on Palo Alto firewalls.
- Migrated site-to-site and remote access VPN configurations while validating secure connectivity.
- Performed policy optimization by consolidating redundant rules and implementing application-based security using App-ID.
- Enabled advanced security features such as Threat Prevention, URL Filtering, Anti-Virus, Anti-Spyware, and WildFire integration.
- Conducted pre-migration validation, post-migration testing, and troubleshooting to ensure seamless connectivity and application availability.
- Worked closely with network, security, and application teams during implementation and change windows to minimize business impact.
- Monitored firewall performance and security logs using Palo Alto monitoring tools and generated reports for validation and compliance.
- Documented migration procedures, firewall configurations, rollback plans, and operational handover documentation.

Project: Enterprise Network Migration to Oracle Cloud Infrastructure (OCI) and Amazon Web Services (AWS)

Overview:

This project focused on migrating enterprise network infrastructure from traditional on-premises data centers to cloud environments hosted on Oracle Cloud Infrastructure (OCI) and Amazon Web Services (AWS). The primary objective was to improve scalability, availability, security, and operational efficiency while enabling a hybrid and cloud-first architecture.

Key Responsibilities:

- Assessed the existing on-premises network architecture and developed a cloud migration strategy.
- Designed and configured Virtual Cloud Networks (VCNs) in OCI and Virtual Private Clouds (VPCs) in AWS.
- Configured subnets, route tables, Internet Gateways, NAT Gateways, Service Gateways, Security Lists, Network Security Groups (NSGs), and Security Groups.
- Established secure connectivity between on-premises data centers and cloud environments using IPSec VPNs and dedicated connectivity (FastConnect for OCI and Direct Connect for AWS, where applicable).
- Implemented network segmentation, access control policies, and firewall security to protect cloud resources.
- Migrated applications and workloads while ensuring minimal downtime and maintaining business continuity.
- Configured load balancers, DNS services, and high-availability architectures to improve application performance and resilience.
- Performed network validation, connectivity testing, troubleshooting, and performance optimization after migration.
- Collaborated with cloud, network, security, and application teams throughout planning, implementation, and post-migration support.
- Prepared migration documentation, network diagrams, rollback procedures, and operational handover documents.

Soft Skills

- Communication
- Problem Solving
- Stakeholder Coordination
- Team Collaboration
- Adaptability
- Time Management
