Professional Summary

Backend Software Engineer with 5 years of experience developing scalable software solutions and cloud-native microservices using Golang. Strong expertise in Go concurrency, goroutines, channels, REST APIs, gRPC, clean code, error handling and performance optimization. Experienced in building containerized applications using Docker and Kubernetes and integrating Kafka, MongoDB, Redis and AWS services. Strong experience in Agile development, code reviews, production troubleshooting, cross-functional collaboration and mentoring junior developers

Technical Skills

Languages: Golang, SQL, Python, Java

Go Programming: Goroutines, Channels, Context, Interfaces, Error Handling, Worker Pools, Mutexes, Synchronization, Profiling, Memory Management, Performance Optimization

Backend Development: REST APIs, gRPC, Microservices, API Design, OpenAPI, Distributed Systems

Databases: MongoDB, PostgreSQL, Redis, Schema Design, Indexing, Query Optimization, Connection Pooling

Messaging: Apache Kafka, Event-Driven Architecture, Asynchronous Processing

Cloud & Containers: AWS, S3, EC2, Lambda, API Gateway, Docker, Kubernetes, Cloud-Native Development

Development Practices: Git, GitLab CI/CD, Agile/Scrum, Code Reviews, Unit Testing, Integration Testing, Debugging, Refactoring, Technical Documentation

Observability: Splunk, Prometheus, Grafana, Structured Logging, Metrics, Production Troubleshooting

Work Experience

Pitney Bowes

Senior Software Engineer

June 2024 – Present

Go, AWS, Kafka, Kubernetes, Docker, Elasticsearch

- Designed and developed scalable Go-based microservices and REST APIs supporting high-volume shipping and logistics workflows.
- Implemented concurrent processing using goroutines, channels, worker pools and synchronization primitives to improve application throughput and responsiveness.
- Applied clean Go design principles including small interfaces, context propagation, explicit error handling and reusable service components for maintainable production code.
- Implemented Kafka-based asynchronous workflows and integrated cloud-native services using Docker, Kubernetes and AWS.
- Collaborated with cross-functional teams, participated in design and code reviews, resolved production issues, and mentored junior developers on Go and microservice development.

Persistent Systems

Software Engineer

Sept 2021 – May 2024

Golang, Kubernetes, Docker, MongoDB, Neo4j, GitLab CI/CD

- Developed and maintained Go-based backend microservices and REST/gRPC APIs for scalable service-to-service communication.
- Implemented concurrent and asynchronous processing using goroutines, channels and worker pools to support high-throughput workloads.
- Containerized Go applications using Docker and deployed services on Kubernetes with focus on scalability, reliability and production support.
- Collaborated with development and QA teams through Agile practices, code reviews, debugging and CI/CD workflows using Git and GitLab.

Selected Projects

High-Scale Create Shipment API

Go, MongoDB, Redis, Kafka, Kubernetes

- Designed and developed a scalable Go-based shipment API using REST, supporting customer, address, parcel, and carrier workflows.
- Optimized MongoDB queries, indexing, Redis caching, and Go concurrency to improve API throughput and reduce database latency.
- Implemented Kafka-based asynchronous processing with idempotency, retries, timeouts, and failure recovery for reliable distributed workflows.

Bulk Shipment Processing Platform

Go, Kafka, Worker Pools, MongoDB, Redis, Kubernetes

- Built a high-throughput Go service to process thousands of shipment records using goroutines, channels, worker pools, and controlled concurrency.
- Implemented MongoDB bulk operations and Redis-based state management to reduce database overhead and improve processing efficiency.
- Integrated Kafka consumer groups, retries, backpressure, and graceful shutdown for reliable asynchronous batch processing.

Electronic Trade Document API

Go, AWS S3, REST APIs, Kubernetes

- Developed a Go REST API for secure upload and management of shipment-related commercial and customs documents using AWS S3 pre-signed URLs.
- Implemented request/file validation, authentication, structured error handling, and secure document access patterns.
- Containerized and deployed the service on Kubernetes with health checks, resource management, and production monitoring.

Education

Academy of Technology

B.Tech in Information Technology

2017 – 2021

CGPA: 8.52 / 10

Certifications

Azure AZ-900 Certified | HackerRank: Python Basics | HackerRank: Golang Basics
